

Harsh Duty CAN Keypads

Achieve the custom look and feel you want with a fully encapsulated rubberized keypad. If a custom shape is what you want for your product, we can design the keypad around your specific application. If cost is your main concern, you can choose an existing keypad design that we can customize to meet your budget but still give you the custom look you desire. Trombetta CAN keypads can be made to work in a J1939, NMEA 2000, or CANopen platform to make implementation easy.
